Product Data Sheet AS 62

General information :

- *Excellent high pressure and heavy load performance (up to 10+4 bars).*
- *High wear resistance.*
- *Operating temperature - 190°C (400°F) to + 250°C (507°F)*
- *High oxidation and chemical resistance.*
- *Cure temperature between 205°C and 260°C.*
- *Recommended film thickness: 15 microns minimum.*

Application :

- *under high pressure or heavy load (slide, coupling, bearing, piston, ball joint, screw elements...)*
- *Our coating AS 62 is used in order to get rid of mechanical dysfunction of pieces en contact, to reduce mechanical efforts and binding or caulking phenomenon.*

Our coating AS 62 will enable you to resolve most of your frictional and therefore dysfunctional problems, even under high pressure and heavy load, to increase your rates, to improve your equipment lifetime

The pieces of information on this card AS 62_2011 are given as a rough guide. They are subjected to variations according to the supply, nature and shape of the parts.
